

Take-Along Tracker

Take-Along Tracker is a miniaturized GPS tracking device, about the size of a D battery, but lighter and thinner. Easy and versatile, put it anywhere, even on a keychain or lanyard.

GPS uses satellites to collect your location & speed data.

Cellular technology transmits the location data to the secure GTX Tracking Portal.

The GTX Tracking Portal can be accessed from the internet or an app, allowing you to monitor the Take-Along Tracker & create performance reports.

S.O.S. button sends a custom alert. Add Voice and the S.O.S. button dials a preset phone number in case of emergency.

Email or text alerts are sent to notify power on/off, low battery, & geozones.

Multiple virtual perimeters, called geozones, can be customized to report when the Take-Along leaves or enters designated areas.

5-7 day battery life. Easy charging with compatible inductive charging pad.

The GTX Smart Locator app keeps you connected with the Take-Along Tracker. Available in Apple App Store and Google Play Store.

Please note: an ongoing service plan subscription is required for device connectivity. Service plans cover all data and notification fees associated with your tracking and alerts.

Put this small, ultra-light GPS tracking and emergency phone system in their pocket, around their neck or in a fanny pack and if anyone wanders you can find them at the touch of a button from any smartphone or tablet. With the S.O.S. button enabled they can even call you or send a text message pin pointing their exact location.
