Vibby Home:

Telecare
redefined

A complete solution and the promising future for Telecare

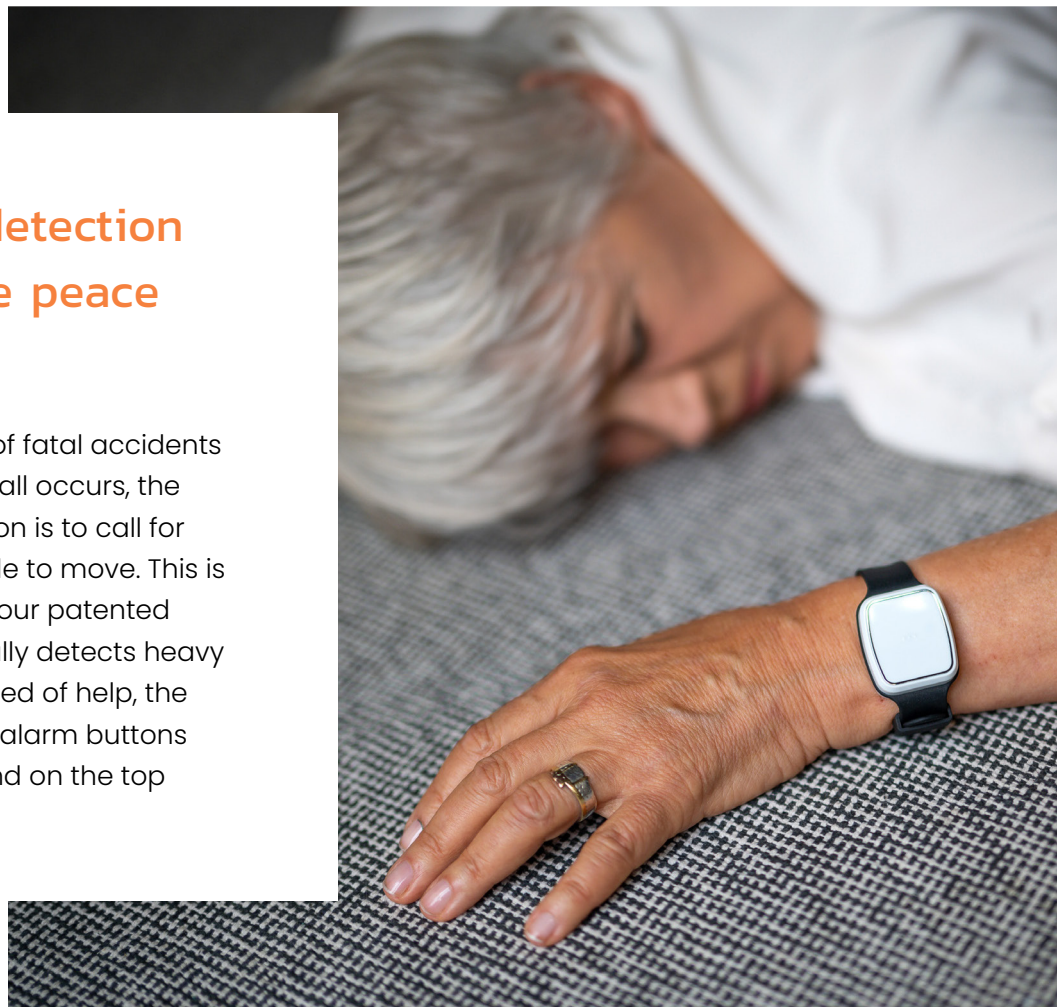

Vibby Home goes beyond safety, offering additional services designed to attract even the most hesitant users to telecare. This innovative approach ensures better engagement and utilisation of the products.

In addition, its features and offerings will attract new customers and help decrease end user turnover.

Responsive fall detection offering complete peace of mind

Falls are the leading cause of fatal accidents for people over 65. When a fall occurs, the main challenge for the person is to call for help while often being unable to move. This is why the Vibby Oak features our patented technology that automatically detects heavy falls. If feeling unwell or in need of help, the user can also press one the alarm buttons located on the Vibby Oak and on the top panel of the Vibby Hub.

Encourages and monitors exercise, enhancing overall wellbeing

According to the World Health Organisation, practicing a physical activity regularly is effective in delaying the onset of dependency and helps reducing and anticipating injuries and illnesses associated with old age. Physical exercise is also the best way to reduce the risk of accidental falls. To promote this, the Vibby Oak monitors the wearer's activity throughout the day, both indoors and outdoors: number of steps, distance traveled, number of floors climbed.

Improving everyday life and environment

Reminders (medications, appointments)

Weather forecasts

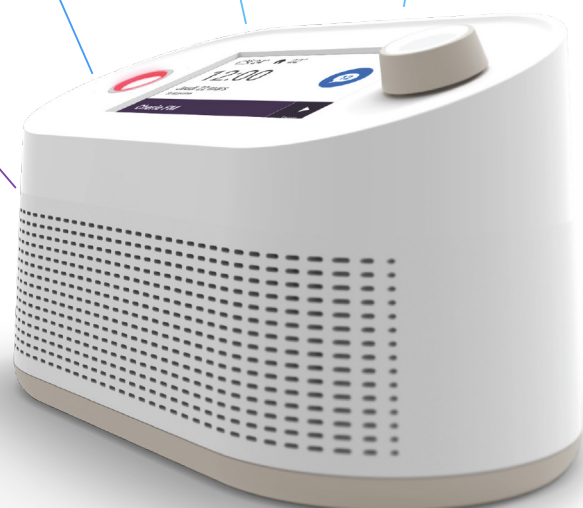

Indoor temperature and air quality

FM Radio

Thanks to its 4.3-inch color screen, the Vibby Hub offers multiple features and services designed to provide end users with daily comfort and quality of life.

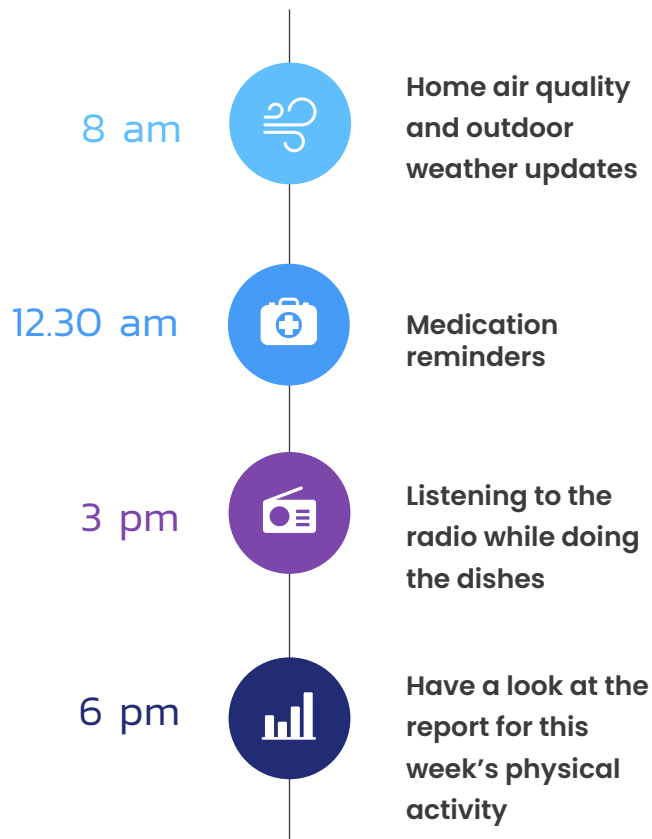

Connect regularly with your end users

Wellness and entertainment features offered by Vibby Home provide frequent interactions. By showing your presence in their everyday life, you reinforce loyalty.

By using other telecare solutions, you supported your end users in challenging moments. With Vibby Home, you can be by their side providing daily support.

Interact directly with the user

The Vibby Hub offers a direct and efficient communication channel with your end users. They will be notified when they receive a message and can read it on the touchscreen.

It allows you and those involved in the person's care to broadcast general information (prevention, advice) or send personalised messages.

The Vibby Home solution provides you with meaningful data regarding the user. This valuable information helps you establish closer and more frequent connections with their care network

Heatwave Alert!

Keep your curtains closed to keep cool.

Have you drank enough today?

The Vibby Oak

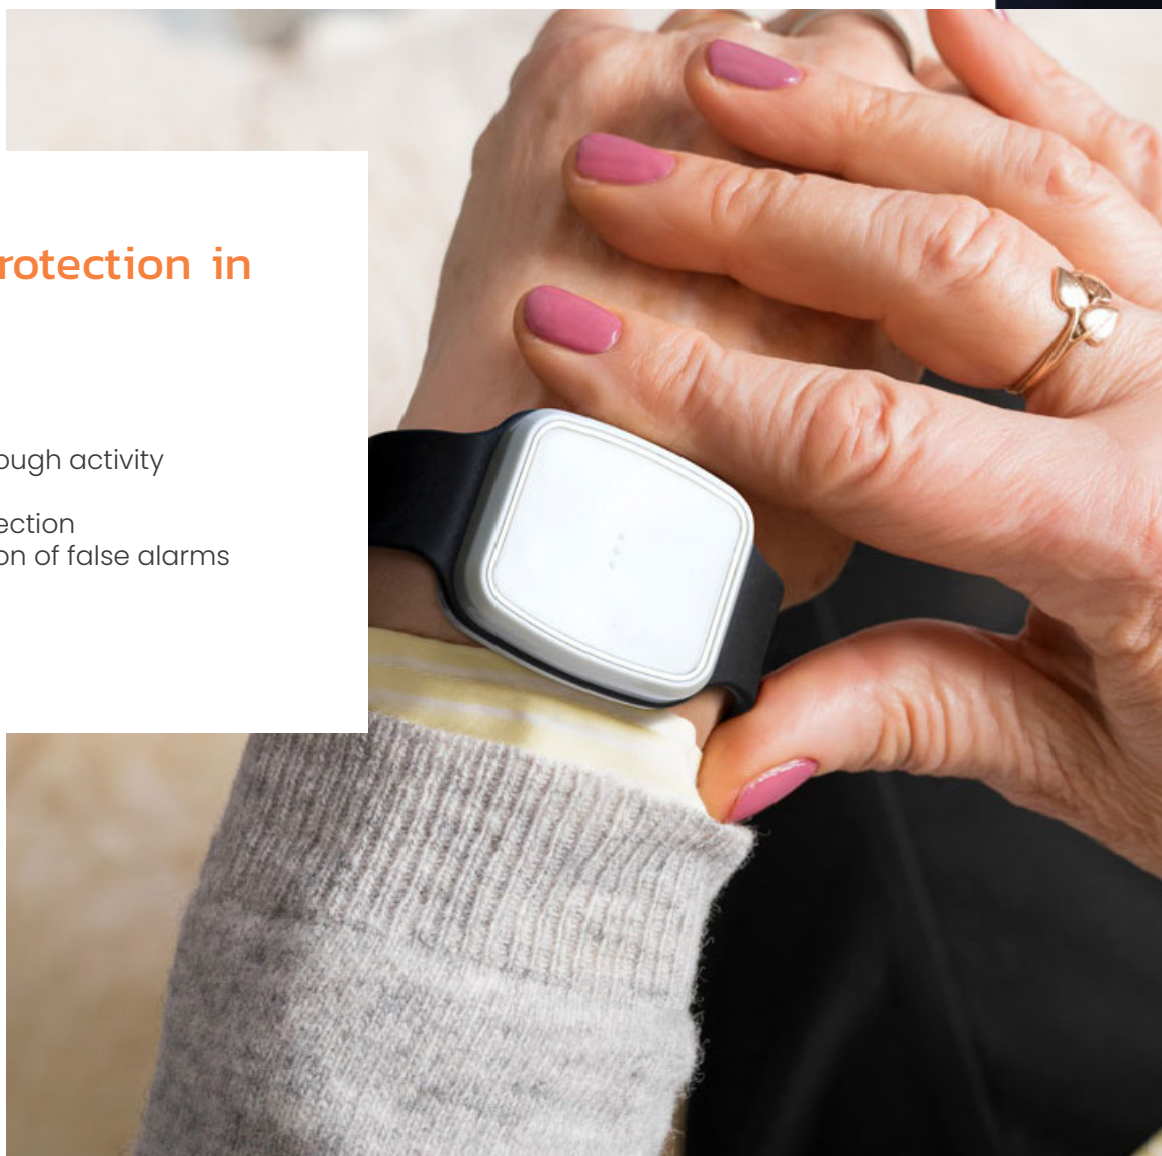

If a false alarm occurs, you can manually cancel the alarms.

Wearing modes: bracelet or pendant
